Eman Mohamed Mosad

Communications & Computer Engineering Student | Mansoura University
Mansoura, Egypt | +20 109 374 0217 | emanmohamedmosad21@gmail.com | linkedin.com/in/eman-matboly321a60343

SUMMARY

Communications & Computer Engineering student at Mansoura University (GPA: 3.7/4.0, expected 2028) with hands-on experience in software development, embedded systems, and digital signal processing using Python, Java, C/C++, HTML, and SQL. Currently training with the Digital Egypt Pioneers Initiative (DEPI), building on academic and team-based projects in system design, sensor integration, and web development. Seeking a software engineering, web development, or computer engineering internship.

EDUCATION

B.Sc. in Communications & Computer Engineering, Mansoura University *Expected May 2028*
Mansoura, Egypt | GPA: 3.7 / 4.0
Relevant Coursework: Data Structures & Algorithms, Digital Logic Design, Networks, Signals & Systems, Software Engineering

EXPERIENCE

Digital Egypt Pioneers Initiative (DEPI) — Intern / Trainee *2026 – Present*
- Participating in a structured technical training program under [DEPI Track / Specialization] as part of Egypt's national digital skills initiative.

TECHNICAL SKILLS

Programming Languages: Python, Java, C, C++
Web Technologies: HTML, Front-End Web Development
Database: SQL, Relational Database Design, SQL Queries
Software Engineering: UML, System Design, SDLC, Use Case Diagrams, ER Diagrams, Class Diagrams, Sequence Diagrams
Embedded Systems: Arduino IDE, Sensor Integration, Embedded C **Design Tools:** Adobe Photoshop, Adobe Illustrator, Canva

PROJECTS

Pharmacy Management Website *Software Engineering · UML · System Design*
- Designed and developed a full-cycle pharmacy management system, producing use-case, ER, class, and sequence diagrams to model system architecture.
- Implemented core modules for inventory tracking, prescription management, and user authentication, applying SDLC principles throughout.

DSP Audio Processing System *Python / MATLAB · Digital Signal Processing*
- Developed an audio processing app implementing filtering, Fourier transforms, and noise reduction with real-time FIR/IIR filtering.
- Analyzed time- and frequency-domain signals applying sampling theory and windowing functions.

Eye Hydration & Stress Monitoring System *Embedded Systems · Sensors · Biomedical Engineering*
- Engineered a non-invasive health monitoring system detecting eye hydration and stress indicators via blink-rate sensor input.
- Integrated signal acquisition hardware with embedded processing logic to classify health states in real time.

Smart Parking System with VIP Zone *Arduino · Embedded C · Electronics II*
- Designed an automated parking system with standard and VIP-reserved zones, integrating ultrasonic sensors and servo motors to detect slot availability and control entry/exit barriers.
- Developed VIP prioritization logic in Arduino IDE, improving system efficiency and user experience.

Arduino Smart Car *Arduino · Sensor Fusion · Embedded Systems*
- Built an autonomous smart vehicle equipped with fire detection, temperature, and ultrasonic distance sensors.
- Implemented sensor fusion logic for obstacle avoidance and environmental hazard alerts.

LEADERSHIP & ACTIVITIES

Graphic Designer & Media Member — Students for Egypt Family *2023 – Present*
Mansoura University Cultural Committee
- Produced 10+ promotional assets (posters, banners, digital content) for major events, including the Street of Arts Festival, Engineering Employment Forum, and Anti-Smoking Awareness Campaign.
- Conducted recruitment interviews for new members as part of the HR team; onboarded and guided incoming volunteers.
- Organized cultural, educational, and technical events throughout the academic year.
- Active Member, Student Union, Mansoura University — participated in organizing student-led initiatives, campus events, and community outreach programs.
